

Solutions

5. Combining Strings

- Write a program that combines two strings and prints the result. For example, combine "Hello" and "World" to print "Hello World".

```
part1 = "Hello"  
part2 = "World"  
print(part1 + " " + part2)
```

6. **Printing Quotes** `python print('"The only limit to our realization of tomorrow is our doubts of today." – Franklin D. Roosevelt')`
7. **Escape Characters** `python print("Hello,\n\tWorld!")`
8. **Printing a Backslash** `python print("This is a backslash: \\")`
9. **Formatted Strings** `python result = 5 + 3 print(f"The result of 5 + 3 is {result}')`
10. **Printing a Multiline String** `python print("""This is a multiline string. It can span multiple lines.""')`
